

# Vaping and Oral Health

## Vaping by the numbers

- More than **10 million** adults use e-cigarettes also known as vaping
- There was a **78% increase** in use of e-cigarettes by high school students from 2017 to 2018
- **1 in 5** high schoolers report vaping

## Vaping FAQ

### Are e-cigarettes safer than traditional cigarettes?

E-liquids, the liquid that is converted to vapor by the e-cigarette, contains nicotine and other chemicals that affect the mouth and body. More research is needed to understand all of the safety concerns

### What are the risks to vaping?

Since e-cigarettes are so new to the market, there is little research on the long-term effects. But the known risks include addiction, childhood nicotine poisoning and burns caused by device explosions.

### Are e-cigarettes less addictive than regular cigarettes?

Some e-liquid pods contain the same amount of nicotine as an entire pack of cigarettes. Nicotine affects concentration and executive decision-making skills, particularly in the adolescent brain.

### Does vaping help you to quit smoking?

For teenagers, vaping increases the likelihood of smoking regular cigarettes. Other cessation options have more research to prove their effectiveness.
